

## Diabetes Screening for People With Schizophrenia or Bipolar Disorder Who Are Using Antipsychotic Medications (SSD)

|  |  |            |     |
|--|--|------------|-----|
| Measure title                                | Diabetes Screening for People With Schizophrenia or Bipolar Disorder Who Are Using Antipsychotic Medications   | Measure ID | SSD |
| Description                                  | The percentage of persons 18–64 years of age with schizophrenia, schizoaffective disorder or bipolar disorder who were dispensed an antipsychotic medication and had a diabetes screening test during the measurement period.  |            |     |
| Measurement period                           | January 1–December 31.   |            |     |
| Copyright and disclaimer notice              | Refer to the complete copyright and disclaimer information at the front of this publication.<br>NCQA website: <a href="http://www.ncqa.org">www.ncqa.org</a> .<br>Submit policy clarification support questions via My NCQA ( <a href="https://my.ncqa.org">https://my.ncqa.org</a> ).   |            |     |
| Clinical recommendation statement/ rationale | Patients with schizophrenia and bipolar disorder who are prescribed antipsychotic medications are at greater risk for diabetes. Regular diabetes screening for this population leads to earlier identification and treatment of diabetes.  |            |     |
